

THE GRAY BAT, *MYOTIS GRISESCENS* HOWELL, FROM BAT CAVE, CARTER COUNTY, KENTUCKY. On September 6, 1931, I visited the Carter Caves, Carter County, Kentucky, and in Bat Cave collected a number of bats, among which was a single male specimen of *Myotis grisescens* A. H. Howell, 1909.

This specimen is of interest since it is apparently the first and only known record of the Gray Bat from Bat Cave, Kentucky, and extends the known range of this species considerably to the east in Kentucky. For the known distribution of *M. grisescens* see Hall and Kelson (1959: 165).

This bat was found in a cluster of *Myotis sodalis* hanging from a side wall of the cave. At the time of collecting many bats were on the wing; some were noted in pairs on the walls and these were *Myotis lucifugus*. Two sizes of *Myotis* were noted in the cave and this may mean that there were other specimens of *M. grisescens* in the cave at that time.

This specimen was made into a study skin and skull and is OSM 1059 in the mammal collection of the Ohio State Museum.—ROBERT M. GOSLIN, *Ohio State Museum, Columbus 10, Ohio*. July 1, 1963
